<b>Abstract (Indonesian)</b>	<input type="text" value="Model standar dibangun berdasarkan asumsi ketiadaan medan neutrino kiralitas kanan. Berdasarkan asumsi ini, neutrino menjadi tidak bermassa dalam model standar. Pada tahun 1968, eksperimen pengukuran fluks neutrino matahari oleh Davis dan kawan-kawan memberikan nilai fluks neutrino sepertiga kali hasil perhitungan teoritis. Hipotesis osilasi neutrino dihadirkan untuk menjelaskan defisit nilai fluks neutrino yang diperoleh eksperimen. Konsep osilasi neutrino"/>
<b>Abstract (English)</b>	<input type="text" value="Standard model are developed based on the assumption of the non-existence of right-handed neutrino field. Based on this assumption, neutrino become have zero mass in standard model. Davis and co-workers measured neutrino flux that emitted from the sun in 1968. The experiment gave result about a factor 3 smaller than theoretical result. The hypotesis of neutrino oscillations appear to explain the deficit of neutrino flux. Concept of neutrino oscillations is phenomenal because it demand"/>
